Bare Root Planting Guide

Visit us @ urbantreefarm.com

- 1. Never let roots dry out. Plant immediately or cover with moist dirt or compost until planting. Do not leave roots exposed at any time.**
- 2. Cover roots just over the highest root. Never bury the graft. You will kill your tree. We do not offer any guarantee for buried or poorly planted trees.**
- 3. Put water on after planting and water occasionally if winter rains are light or absent. The regular watering cycle begins after the new shoots open.**
